MEMORANDUM FOR THE RECORD

SUBJECT: Rumored Texas Instruments Parts in the SA-6

1. The following information is supplied in response to a request from the CIA. I have been closely involved with the exploitation of the SA-6 missile electronics, and can state that we have closely examined the available electronic components and have found no parts that can be identified as of US manufacture.

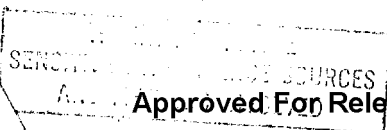

2. In particular, with regard to the rumor that some Texas Instrument components or inspector's markings were found in the SA-6, to the best of our knowledge this is not true.

Lester M. Fryslie
